01 Executive Summary

OVERVIEW OF THE INVESTMENT OPPORTUNITY

Steaders8 Farm is an established Nigerian commercial farm engaged in the large-scale cultivation of cucumbers, sweet corn, and yam through open-field farming. The farm has built practical experience in commercial crop production and the supply of quality produce to local markets.

As part of its long-term growth strategy, Steaders8 Farm is expanding into controlled-environment agriculture through the development of modern green-houses for Bell Pepper and Super Habanero Pepper. The expansion is intended to support more consistent production, improved crop quality, efficient use of water and agricultural inputs, and access to premium markets.

Phase One will involve four commercial greenhouses, each designed to accommodate approximately 500 plants. Two greenhouses will be allocated to Bell Pepper and two to Super Habanero, creating an estimated total capacity of 2,000 plants per production cycle.

Investment Overview

Steaders8 Farm is seeking **₦24,000,000** through a five-year project-based profit-sharing investment arrangement. The funding will cover greenhouse construction, irrigation and production systems, initial production inputs, labour, working capital, and contingency provisions.

Based on current planning assumptions, average marketable yield is estimated at **3 kilograms per plant**. These figures are projections rather than guarantees and will be reviewed against actual production performance, market prices, and operating costs.

The project targets wholesalers, supermarkets, hotels, restaurants, food processors, institutional buyers, and other commercial customers that require reliable supplies of high-quality vegetables. It offers investors the opportunity to participate in the expansion of an existing agricultural business while Steaders8 Farm retains ownership and operational control.

02 Company Profile and Current Operations

ABOUT THE BUSINESS AND ITS EXPANSION RATIONALE

About Steaders8 Farm

Steaders8 Farm is a Nigerian commercial agricultural enterprise committed to producing high-quality crops through sustainable and increasingly technology- driven farming practices. Its existing operations are based on large-scale open-field cultivation.

Current Farm Operations

The farm currently cultivates cucumbers, sweet corn, and yam. Through these operations, the business has developed experience in land preparation, irriga- tion, crop nutrition, pest and disease management, harvesting, post-harvest handling, produce marketing, and the coordination of farm labour.

> **Strategic Extension**
>
> The proposed greenhouse project is therefore **not a new stand-alone start-up**. It is a strategic extension of an existing commercial farming operation into high-value controlled-environment vegetable production.

Why the Farm Is Expanding

- **Diversify** the farm's crop portfolio into Bell Pepper and Super Habanero.
- **Improve control** over irrigation, crop nutrition, pest pressure, and growing conditions. **Produce more**
- **consistent quality** for premium commercial buyers.
- **Reduce dependence** on seasonal open-field conditions.
- **Build a scalable platform** for future greenhouse expansion.

03 Vision, Mission and Core Values

THE FOUNDATION OF OUR ENTERPRISE

Vision

To become one of Africa's leading climate-smart agricultural enterprises, delivering premium agricultural products through innovation, sustainable farming practices, and modern technology while creating lasting value for investors, customers, employees, and communities.

Mission

To produce high-quality agricultural products through efficient, sustainable, and technology-driven farming systems that improve food security, create employment, maximize productivity, and generate consistent value for stakeholders.

♥ Core Values

VALUE	COMMITMENT
Excellence	Maintain high standards in crop production, operations, and customer service.
Integrity	Operate with honesty, transparency, accountability, and professionalism.
Innovation	Adopt suitable technologies and continuously improve farming systems.
Sustainability	Use resources responsibly and support long-term agricultural productivity.
Quality	Produce safe, fresh, and market-ready agricultural products.
Partnership	Build strong relationships with investors, buyers, suppliers, staff, and communities.
Impact	Contribute to food security, job creation, and agricultural development.

04 The Investment Opportunity

A STRATEGIC OPPORTUNITY IN HIGH-VALUE AGRICULTURE

Demand for reliable supplies of premium vegetables is supported by households, produce distributors, supermarkets, hotels, restaurants, catering businesses, and food processors. At the same time, inconsistent open-field supply creates an opportunity for producers that can deliver more predictable quality and volume.

Steaders8 Farm is positioned to pursue this opportunity by combining its existing farming experience with commercial greenhouse production of Bell Pepper and Super Habanero.

⭐ Why This Investment Matters

- Investment is being made into an **expansion of an operating farm**, not an untested concept.
- The selected crops are **high-value vegetables** with diverse market applications.
- The project establishes **long-term productive infrastructure** capable of supporting multiple crop cycles. The project-based structure **separates investor participation** from ownership of Steaders8 Farm.

Investment Structure at a Glance

ITEM	PROPOSED STRUCTURE
Funding target	₦24,000,000
Number of investors	Up to 8
Indicative contribution	₦3,000,000 per investor
Model	Project-based profit sharing
Term	Five years
Ownership	No equity in Steaders8 Farm
Distribution basis	Actual net profit after verified project expenses

05 The Greenhouse Solution

CONTROLLED-ENVIRONMENTAGRICULTUREFORPREMIUM PRODUCTION

Why Greenhouse Farming

Greenhouse production provides greater control over important production factors such as irrigation, plant nutrition, humidity, ventilation, crop support, and pest monitoring. It does not eliminate agricultural risk, but it can improve consistency and operational efficiency when professionally managed.

BENEFIT	COMMERCIAL RELEVANCE
More stable production planning	Supports more reliable customer supply.
Improved crop quality	Helps achieve better uniformity, freshness, and appearance.
Efficient water and fertilizer use	Drip irrigation and fertigation reduce avoidable waste.
Reduced weather exposure	Limits the direct impact of heavy rainfall, wind, and other open-field conditions.
Improved monitoring	Supports faster detection and management of crop problems.
Scalability	Successful units can be replicated as demand and capital increase.

Phase One Solution

- Four commercial greenhouse units.
- Two units for Bell Pepper and two units for Super Habanero.
- Approximately 500 plants per greenhouse.
- Drip irrigation and fertigation.
- Structured nursery, crop management, harvesting, grading, packaging, and sales processes.

06 Market Opportunity

TARGET CUSTOMERS AND MARKET POSITIONING

Target Customers

Wholesale Distributors
Produce distributors serving retail and institutional markets

Supermarket Chains
Major retail grocery outlets requiring consistent supply

Hotels & Hospitality
Premium hospitality businesses requiring quality produce

Restaurants
Fast-food outlets and fine dining establishments

Catering Companies
Event and institutional catering services

Food Processors
Companies requiring raw materials for processed goods

Open-Market Traders
Traditional market vendors

Institutional Buyers
Schools, hospitals, government

Export Markets
Produce exporters where viable

Market Positioning

Steaders8 Farm intends to compete on reliability, consistent quality, professional handling, and the ability to build repeat supply relationships. The farm will avoid dependence on a single buyer category by developing a diversified customer portfolio.

Market Development Priorities

- Engage potential commercial buyers **before harvest periods**.
- Pursue supply agreements where volumes, prices, and payment terms are commercially acceptable.
- Maintain quality standards through sorting, grading, packaging, and timely delivery.
- Monitor prevailing market prices and adjust sales channels where necessary.
- Build a reputation for dependable supply and transparent business relationships.

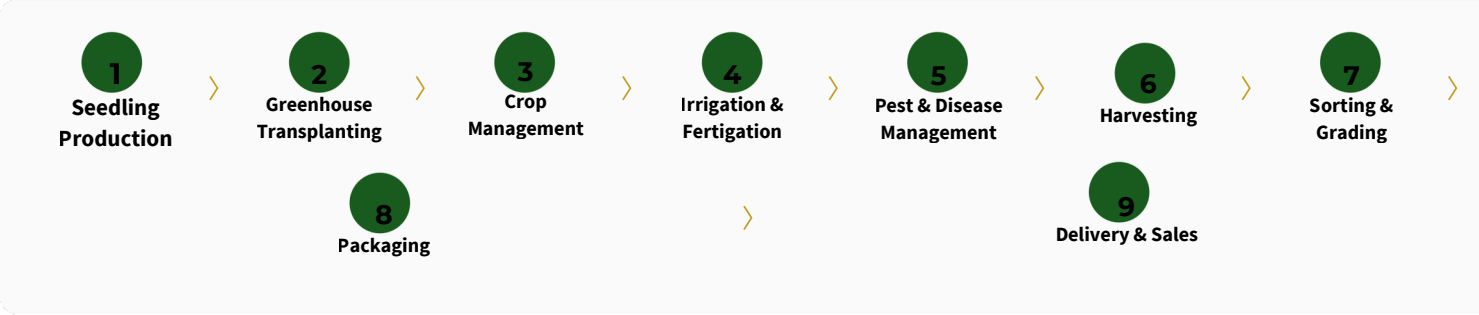

07 Business and Revenue Model

HOW VALUE IS CREATED AND DISTRIBUTED

Primary Revenue Model

The primary revenue source will be the sale of greenhouse-grown Bell Pepper and Super Habanero to commercial and wholesale buyers. Revenue will be generated as produce is harvested, graded, packaged, and sold during the production cycle.

Operational Flow

Use of Project Cash Flow

- Pay verified operating expenses and statutory obligations.
- Maintain and repair greenhouse infrastructure.
- Set aside necessary reserves and working capital for the next cycle. Determine distributable net profit
- Distribute the agreed investor share and retain the farm's share.

08 Phase One Implementation

TECHNICAL SPECIFICATIONS AND PROJECT SCOPE

Project Scope

- Construction and installation of four greenhouse units
- Installation of irrigation, fertigation, and water distribution systems
- Procurement of seeds, growing media, fertilizers, micronutrients, and crop protection products
- Nursery establishment and transplanting
- Recruitment and deployment of operational labour
- Crop management, harvesting, grading, packaging, and distribution

Greenhouse Allocation

01	02	03	04
Bell Pepper	**Bell Pepper**	**Super Habanero**	**Super Habanero**
Capsicum annuum	Capsicum annuum	Capsicum chinense	Capsicum chinense
500 Plants	**500 Plants**	**500 Plants**	**500 Plants**

Technical Specifications

ITEM	SPECIFICATION
Number of greenhouses	4 units
Greenhouse size	10 m × 30 m per unit
Total floor area	1,200 m^2
Total plant capacity	Approximately 2,000 plants
Production system	Controlled-environment greenhouse
Irrigation method	Drip irrigation with fertigation
Water system	Storage tank and distribution system
Planning cycle	[illegible]
Expected average yield	[illegible] per plant, subject to actual performance

Implementation Stages

STAGE	MAIN ACTIVITIES
1. Preparation	Secure funding, finalize suppliers, prepare site.
2. Construction	Install greenhouse structures, irrigation, and water systems.
3. Crop establishment	Raise seedlings, transplant, begin irrigation and fertigation.
4. **Production management**	Monitor crops, prune, trellis, manage nutrition, pests, and diseases.
5. Harvest and sales	Harvest, grade, package, deliver, report results, and prepare the next cycle.

09 Production Plan

FROM SEED TO HARVEST

Production Cycle

The project will use a structured production process beginning with nursery establishment and continuing through transplanting, crop management, harvest- ing, and post-harvest handling. The agricultural cycle is estimated at approximately six months under normal conditions, while financial planning should allow additional time for installation, buyer scheduling, and payment collection.

STEP 1

Seed Procurement

Use certified Bell Pepper and Super Habanero seed from reputable suppliers.

STEP 2

Nursery Establishment

Raise seedlings in appropriate trays and growing media under monitored irrigation, nutrition, and disease-prevention conditions.

STEP 3

Transplanting

Move healthy seedlings into prepared greenhouse production spaces using appropriate spacing.

STEP 4

Crop Management

Apply drip irrigation, fertigation, pruning, trellising, crop monitoring, sanitation, and integrated pest management.

STEP 5

Har vesting

Harvest at suitable market maturity while minimizing damage and rejecting unmarketable produce.

STEP 6

Post-Harvest Handling

Sort, grade, package, and dispatch produce promptly to preserve quality.

STEP 7

Record-Keeping

Track input use, crop performance, labour, harvest volumes, sales, expenses, and losses for each greenhouse.

Estimated Production Capacity

ITEM	PLANNING ESTIMATE
Number of greenhouses	4
Plants per greenhouse	500
Total plants	2,000
Estimated yield per plant	3 kg
Estimated total yield	6,000 kg per production cycle

10 Marketing and Sales Strategy

BUILDING SUSTAINABLE COMMERCIAL RELATIONSHIPS

Sales Approach

The project will prioritize business-to-business sales and repeat commercial relationships rather than depending only on spot-market transactions. Buyer development should begin before harvest to reduce the risk of unsold produce and weak bargaining power.

Key Sales Actions

fl **Map & Qualify Buyers**
Identify and evaluate wholesale and institutional buyers

Agree Specifications
Product specs, volumes, delivery schedules, payment terms, quality standards

Multiple Channels
Use multiple sales channels to reduce concentration risk

Regular Communication
Maintain regular communication with buyers throughout the production cycle

Monitor Prices
Monitor prices and direct produce to the strongest commercially viable channel

Professional Logistics
Use professional packaging and timely logistics to protect product quality

Brand Positioning

Steaders8 Farm will position its greenhouse produce around freshness, consistency, professional handling, reliable supply, and responsible production practices.

11 Financial Projections

REVENUE ESTIMATES AND COST STRUCTURE

> ⚠ **Important Disclaimer**
>
> The projections below are based on supplier quotations and operating assumptions provided during proposal development.

Key Assumptions

ITEM	ASSUMPTION
Number of greenhouses	4
Plants per greenhouse	500
Total plants	2,000
Average yield per plant	3 kg
Total expected yield	6,000 kg
Bell Pepper planning price	₦11,000/kg
Super Habanero planning price	₦5,000/kg
Production mix	1,000 Bell Pepper plants and 1,000 Super Habanero plants

Projected Revenue per Production Cycle

TOTAL GROSS REVENUE
₦48M

BELL PEPPER
1,000 plants · 3,000 kg · ₦11,000/kg

SUPER HABANERO
1,000 plants · 3,000 kg · ₦5,000/kg

BELL PEPPER REVENUE
₦33,000,000

SUPER HABANERO REVENUE
₦15,000,000

CROP	PLANTS	EXPECTED OUTPUT	PLANNING PRICE	PROJECTED GROSS REVENUE
Bell Pepper	1,000	3,000 kg	₦11,000/kg	**₦33,000,000**
Super Habanero	1,000	3,000 kg	₦5,000/kg	**₦15,000,000**
Total	**2,000**	**6,000 kg**	–	**₦48,000,000**

Initial Project Cost

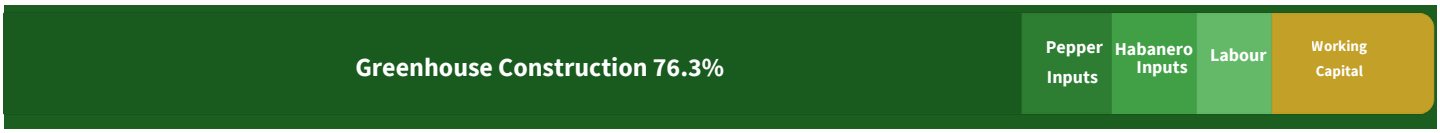

COST CATEGORY	AMOUNT
Four greenhouse units	₦18,313,104
Bell Pepper initial inputs	₦1,236,000
Super Habanero initial inputs	₦1,190,000
Labour and initial operations	₦1,000,000
Working capital and contingency	₦2,260,896
Total funding requirement	**₦24,000,000**

12 Funding Requirement and Use of Funds

HOW INVESTOR CAPITAL WILL BE DEPLOYED

Steaders8 Farm seeks **₦24,000,000** to establish and commission Phase One, fund the initial production cycle, and maintain a reasonable working-capital and contingency reserve.

Funding Allocation

- **Greenhouse Construction** — ₦18,313,104 (76.3%)
- **Super Habanero Inputs** — ₦1,190,000 (5.0%)
- **Working Capital & Contingency** — ₦2,260,896 (9.4%)
- **Bell Pepper Inputs** — ₦1,236,000 (5.2%)
- **Labour & Operations** — ₦1,000,000 (4.2%)

Detailed Use of Funds

CATEGORY	AMOUNT	PURPOSE
Greenhouse construction	₦18,313,104	Supply and installation of four greenhouse units and included systems.
Bell Pepper inputs	₦1,236,000	Seeds, nursery, growing media, nutrition, crop protection, supports, packaging, and related items.
Super Habanero inputs	₦1,190,000	Seeds, nursery, growing media, nutrition, crop protection, supports, packaging, and related items.
Labour and initial operations	₦1,000,000	Planting, crop management, initial labour, and operating support.
Working capital and contingency	₦2,260,896	Unforeseen costs, price changes, logistics, and operational liquidity.
Total	**₦24,000,000**	**Phase One funding target.**

Stewardship of Investor Funds

- Use a dedicated project account where practicable
- Approve and document material project expenditures
- Maintain invoices, receipts, payroll records, and supplier documentation Prepare periodic budget-versus-actual reports
- Provide production and financial reports after each cycle
- Use investor capital only for agreed project purposes

13 Profit-Sharing Investment Model

STRUCTURE AND DISTRIBUTION FRAMEWORK

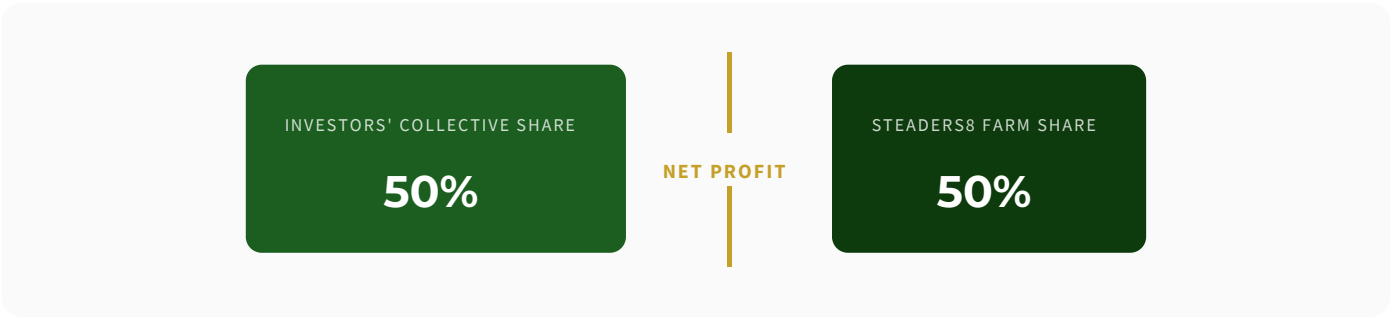

Proposed Structure

ITEM	DETAILS
Total capital required	₦24,000,000
Indicative number of investors	8
Indicative contribution per investor	₦3,000,000
Investment model	Project-based profit sharing
Proposed term	Five years
Equity in Steaders8 Farm	None
Profit basis	Actual net profit after verified project expenses and agreed reserves

How the Model Works

1. Investors contribute the agreed project capital.
2. Steaders8 Farm applies the funds to the approved greenhouse project.
3. At the end of each production cycle, the farm prepares an operational and financial report showing gross revenue, verified expenses, reserves, and net profit
4. The agreed investor percentage is applied only to distributable net profit.
5. The investors' collective share is divided according to each investor's contribution.
6. Distributions continue during the agreed five-year term, subject to actual project performance and the executed investment agreement.

⚖️ Illustrative Profit Distribution Only

□ Example Calculation

If a production cycle generates **₦20,000,000** in verified net profit and the final agreement allocates **50% to investors** and **50% to Steaders8 Farm**, the in- vestors' collective share would be **₦10,000,000**. If eight investors contributed equally, each would receive **₦1,250,000** for that cycle.

14 Risk Management, Governance and Growth Strategy

PROTECTING INVESTMENT VALUE AND PLANNING FOR SCALE

⚠ Key Risks and Mitigation

RISK	POTENTIAL IMPACT	MITIGATION
Pests and disease	Reduced yield or quality	Integrated pest management, hygiene, monitoring, approved treatments, and agronomic supervision.
Market price changes	Lower revenue or margins	Multiple buyers, pre-harvest engagement, price monitoring, and diversified sales channels.
Input cost increases	Higher operating costs	Supplier relationships, early procurement where sensible, and contingency reserves.
Water interruption	Crop stress and yield loss	Adequate storage, system maintenance, and backup water planning.
Equipment or irrigation failure	Production disruption	Preventive maintenance, inspections, and essential spare parts.
Labour or management gaps	Delayed or inconsistent operations	Training, supervision, SOPs, and clear responsibilities.
Cash-flow constraints	Interrupted production	Working-capital controls, budgeting, collection management, and reserves.
Extreme weather or structural damage	Infrastructure loss	Quality construction, inspection, site planning, and appropriate insurance where available.

Governance and Reporting

- Maintain separate project records and periodic management accounts
- Report production performance and financial results after each cycle Document major
- procurement and related-party transactions
- Communicate material project risks or setbacks promptly
- Retain professional accounting, legal, and agronomic support where required

Growth Strategy

Phase One is intended to establish a commercially viable greenhouse platform and generate operational data. Expansion will depend on proven production results, market demand, available capital, and management capacity.

Phase One	Phase Two	Phase Three
Construct and operate four greenhouses; establish buyers, systems, and performance records.	Increase greenhouse capacity, improve logistics, and secure larger commercial supply relationships.	Consider additional sites, high-value crops, regional markets, and stronger value-chain partnerships where commercially justified.

15 Management, Investment Case and Conclusion

THE TEAM BEHIND THE VISION

Management and Accountability

The greenhouse project will be led by the management of Steaders8 Farm, supported by trained operations personnel and external specialists where necessary. Key responsibilities will include project implementation, greenhouse supervision, agronomy, irrigation and fertigation, pest and disease man- agement, quality control, financial reporting, buyer development, and investor communication.

⭐ Why Invest in Steaders8 Farm

Existing Operation

The project expands an existing commercial farming operation.

Proven Experience

The farm has practical open-field production experience.

High-Value Crops

The project focuses on high-value vegetables with several potential buyer categories.

Long-Term Infrastructure

Greenhouse infrastructure can support multiple production cycles.

Project-Specific Model

The investment model is project-specific and does not dilute ownership of the wider farm business.

Governance Focus

The proposal emphasizes reporting, governance, risk management, and disciplined use of funds.

Measured Expansion Platform

Phase One provides a platform for measured, evidence-based expansion.

www.steaders8.farm 08131074911 3 Balogun Street, Anifowoshe, Ikeja Lokoji, Ofada, Ogun State

Dear Esteemed Investor,

Thank you for considering this opportunity. Your decision to partner with us is more than a financial contribution it is a vote of confidence in a project built on strategy, sustainability, and guaranteed market demand. Together, we are creating value that grows beyond numbers.
Your investment is not only safe, but positioned to multiply. We are committed to transparency, excellence, and delivering the strong returns we have promised.
Let's build something profitable, impactful, and long-lasting together.
-Iwewezinem stephen

THANK YOU
